...and Resilient Travel Corridor Solutions

For Municipalities Located in
the Lake Champlain Watershed of
New York

RRAMP

The Rural Roads Active Management Program (RRAMP) was formed to assist private associations, county and municipal highway departments with travel corridor risk assessment, project prioritization, best management practice selection, and funding assistance for critical sites.

By targeting and remediating travel corridors undergoing deteriorating conditions, threatening public safety and natural resources, RRAMP will provide a mechanism for economic and environmental sustainability throughout the watershed.

The Lake Champlain watershed of NY's *Rural Roads Active Management Program* aims to protect and enhance travel infrastructure and environmental protection through an all-inclusive, inter-jurisdictional, regional effort.

RRAMP will engage and foster cooperation between the numerous resource protection organizations and associations, the 55 municipalities, and 5 county highway departments throughout the watershed, to achieve program mission and goals.

Program Mission

Integrate a harmonious, climate resilient, and sustainable network of secondary road corridors throughout the Lake Champlain Watershed of NY through cooperative implementation of conservation practices, critical site restoration, and strategic management.

Program Goals

- ⊗ Create a beneficial, uniform program for all municipalities in Lake Champlain watershed to utilize
- ⊗ Provide best management practice / resource protection guidance and maintenance manuals
- ⊗ Assist municipalities with identifying opportunities to protect infrastructure and natural resources
- ⊗ Provide project financial assistance through a local grants program
- ⊗ Obtain long-term, continuous funding stream for program stability
- ⊗ Improve and protect water quality and natural habitats impacted throughout the watershed
